AirBridgeCargo Airlines launches ‘abc premium’ capacity guarantee for customers worldwide

AirBridgeCargo Airlines (ABC), one of the leading global carriers with extensive services and products for specialty cargo, has introduced a new ‘abc premium’ product for customers seeking guaranteed capacity and prioritization on specific flights across ABC’s international network.

“After the completion of all internal procedures and alignment of our processes, we have introduced our dedicated product with access to guaranteed capacity. We expect abc premium to attract high demand from customers with urgent, time-sensitive shipments. On top of this, we will be able to combine existing services and products, offering our customers the best options featuring the required benefits. For example, for vaccines, we might combine abc pharma and abc premium or for aircraft engines use both abc XL and abc premium to deliver the speed and quality individual customers require,” highlighted

Fedor Novikov, Deputy General Director, Products, of AirBridgeCargo Airlines.

AirBridgeCargo Airlines offers a full range of dedicated services for its customers with specialty cargo to accommodate the diverse needs of customers worldwide. Its modern fleet of efficient freighters as well as the expertise and experience of its certified personnel, access to flights of its interline partners and online options for track&trace, are continuing to bolster the airline’s volumes of non-general cargo.
